

IP 01 Revolve

Moving

Our Revolve provides sensations children can't simulate easily in every day life by combining both a spinning and rocking movement which can be used for gentle spinning and fast, dynamic play.

The outer ledge, coupled with the seating position created by the deep bowl makes the Revolve very accessible to children of all abilities. The wide rim, at wheelchair transfer height, not only allows for ease of transfer but also increases play value as children can sit comfortably to propel themselves around independently.
