

IP 16 Butterfly

Moving

Our more inclusive, accessible version of the traditional seesaw can be used in a variety of ways, allowing the user to define their own play experience. Designed at wheelchair transfer height a child can easily move onto the Butterfly where possible and the surface area is spacious enough for several children to sit or stand together.

The upturned arms allow the user to sit or lie supported on the surface which is beneficial for those who require some extra postural support. The wide surface is covered in porous rubber ensuring users feel safe and secure while standing.

Activities Rocking, balance, seating, social, supportive

Features Upturned arms, rubber wetpour surface
