

Motion

Our popular Wave seat with an alternative frame and smaller basket seat - retaining the core concept of a supportive basket swing that provides a social hub where children of all abilities can play together.

The wide, shallow seat, at wheelchair transfer height allows users to get in and out with ease.

The design allows a child to sit or lie with support from a family member or carer. The Mini Wave swing has also been created with children, teens, and adults in mind, providing a piece that can be enjoyed by the whole family.

Scale: 1:50

A4
